THE INGERSOLL LIQUID RUBBER PAINTS

WE DO NOT BELIEVE A MORE
DURABLE PAINT IS PRODUCED

Ingersoll "Liquid Rubber" Paints are made for **DURABILITY**, which is the **only standard** of quality. Over Half a Century's use proves Ingersoll Paints **BEST**.

Ingersoll "Liquid Rubber" Paints are made in Pure Snow White and bright, clear shades and tints. When properly applied according to directions, they give a hard, glossy, yet elastic coating (hence the name "**LIQUID RUBBER**") which will neither chalk nor scale, and **will give long years of satisfactory service.**

Under our formula, the tendency of White Lead to "chalk" and Oxide of Zinc to "scale" is overcome. The Pigments and Oils are thoroughly united by steam mixing and grinding, producing a **perfectly combined** Mixed Paint that will not separate or disintegrate.

In the manufacture of our White Paint, we use a specially Refined Linseed Oil, heavy bodied, and almost transparent in color, which enables us to produce a **Pure Snow White**, not possible with ordinary Linseed Oil.

For full particulars regarding these Paints, Selection of Harmonious Colors, Covering Capacity and **Lowest Factory Prices** Direct to You, see **INGERSOLL PAINT BOOK** which tells all about Paint and Painting. **MAILED FREE ON APPLICATION. CORRESPONDENCE SOLICITED.**
